

Ukpai Precious

Full-Stack Software Engineer specializing in Web3 application development and modern JavaScript technologies. Experienced in designing, developing, and deploying decentralized applications using Solidity, React.js, Next.js, TypeScript, Node.js, and EVM-compatible blockchain networks including Ethereum and Base.

SKILLS

Languages: Solidity, TypeScript, JavaScript, HTML5, CSS3

Frontend: React.js, Next.js, Redux, Tailwind CSS

Backend: Node.js, Express.js, REST APIs, GraphQL

Blockchain: Ethereum, Base, EVM, Hardhat, ethers.js, Viem, Wagmi, RainbowKit, ERC-20, Smart Contract Development, Wallet Integration

Databases: MongoDB, Supabase

DevOps & Tools: Git, GitHub, Docker, Vercel, CI/CD, GitHub Actions, Webpack, Vite, Babel

Testing: Jest, Cypress

Software Engineering: Event-Driven Architecture, Microservices, Responsive Web Development, Agile Development, Technical Documentation, Problem Solving, Prompt Engineering

EDUCATION

Federal University of Petroleum resources, Delta state Nigeria — *Bsc. Computer Science*

August 2019 - Sept. 2024

SELECTED PROJECT EXPERIENCE

Paynexxa – Crypto Subscription Payment Infrastructure

 [Live Demo](#)

 [GitHub](#)

Technologies: Solidity · Next.js · React.js · TypeScript · Node.js · MongoDB · Supabase · Wagmi · RainbowKit · ethers.js · REST APIs · Ethereum · Base

Designed and developed a decentralized crypto subscription payment platform enabling businesses to accept automated recurring stablecoin payments across EVM-compatible blockchain networks.

- Architected and implemented **Solidity smart contracts** enabling automated recurring stablecoin subscription payments across **Ethereum-compatible blockchain networks**.
- Engineered a full-stack merchant dashboard using **Next.js**, **React.js**, and **TypeScript** for subscription lifecycle management, payment tracking, and merchant administration.
- Integrated **Sign-In with Ethereum (SIWE) authentication** and wallet connectivity using **Wagmi** and **RainbowKit**, providing secure decentralized user authentication.
- Developed blockchain event listeners to monitor on-chain transactions and automatically process payment confirmations and merchant notifications.
- Designed and implemented RESTful APIs supporting merchant onboarding, subscription management, authentication, and payment processing workflows.
- Designed a scalable backend architecture using MongoDB and Supabase for merchant, subscription, and payment data management.
- Implemented webhook-based notification services enabling external applications to receive real-time blockchain payment updates.
- Developed responsive React.js interfaces delivering a consistent user experience across desktop and mobile devices.
- Deployed and maintained production-ready frontend applications using Netlify while implementing modern JavaScript development workflows.

ERC-20 Token Ecosystem

 [Github](#)

 [Live Contract](#) ([Sepolia](#))

Deployed Contract Address: 0x4f8233Ddb735dDFA8B7122B2936f414B61e30eF2

Technologies: Solidity · Hardhat · OpenZeppelin · ethers.js · Ethereum · JavaScript

Designed and developed an ERC-20 token ecosystem demonstrating token creation, staking, vesting, liquidity locking, and secure token management on Ethereum.

- Designed and implemented 4+ **Solidity smart contracts** supporting **ERC-20 token creation, staking, vesting schedules, and liquidity locking mechanisms**.

- Developed an **ERC-20 token** contract following **OpenZeppelin** standards, implementing secure token transfers, ownership management, and configurable token supply.
- Engineered staking contracts enabling token locking and automated reward distribution through smart contract logic.
- Implemented token vesting contracts supporting time-based token release for controlled distribution scenarios.
- Designed liquidity locking contracts to improve token security and demonstrate decentralized asset management principles.
- Configured **Hardhat** development workflows for local development, deployment, compilation, and automated testing.
- Integrated **ethers.js** to deploy, interact with, and automate communication between frontend applications and deployed smart contracts.
- Applied **Solidity** optimization and smart contract security best practices, including reusable contract architecture and **OpenZeppelin** libraries.

NFT Marketplace & Smart Contract Platform

<> [Github](#)

 [Live contract](#) ([Sepolia](#))

Deployed Contract address: 0x078101bC59Ec52547C0a5E270b1695e84151861C

Technologies: Solidity · Hardhat · React.js · ethers.js · Ethereum · JavaScript

Engineered a decentralized NFT marketplace enabling NFT minting, marketplace transactions, ERC-20 payment processing, and blockchain-based asset management.

- Designed and implemented **Solidity smart contracts** powering **NFT minting, marketplace transactions, and decentralized asset ownership**.
- Developed **ERC-20 payment gateway** contracts enabling **secure token-based purchases** within the NFT marketplace.
- Implemented **batch NFT minting** functionality to **streamline creation of multiple digital assets** within a single workflow.
- **Integrated frontend components with deployed smart contracts using ethers.js** to provide seamless wallet interaction and blockchain transaction management.
- Configured Hardhat development environments for smart contract compilation, deployment, and testing across Ethereum-compatible networks.
- Designed reusable Solidity contract architecture to improve maintainability and support future marketplace enhancements.
- **Applied EVM development best practices** and secure smart contract design principles throughout the application lifecycle.
- Built responsive React-based user interfaces enabling NFT minting, wallet connectivity, and marketplace interactions.

Portfolio Website

 [bishopdeveloper](https://bishopdeveloper.com)

- Designed and developed a responsive developer portfolio showcasing software engineering projects, technical skills, and blockchain development experience.
- Built reusable React components and responsive layouts optimized for desktop and mobile devices.
- Integrated GitHub repositories, live demos, and professional profiles to improve recruiter accessibility.
